NEDO human cDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; cDNA full insert sequencing:

Research Association for Biotechnology (RAB); cDNA library

construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, diabetic
ischaemic limb angiogenesis; diabetic neovascularisation; fracture; cytostatic; antiarthritic; antipsoriatic; antidiabetic; ophthalmological; gynaecological; gene; ss.

pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, theumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiactasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, isohaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine pro-endostatin coding sequence.

a signal sequence, an immunoglobulin Fc region, and an angiogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours that may be treated include solid tumours, blood born tumours tumour metastasis, benigh tumours including haemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis,

The present sequence encodes an endostatin protein which is the carboxy terminal protein of human collagen XVIII. Recombinant mouse endostatin (20 mg/kg) was administered subcutaneously to mice implanted with Lewis lung carcinomas. There was tumour mass regression non-detectable levels after 12 days of therapy due to the angiogenesis inhibitory activity of endostatin. Thus the protein is useful for treatment of angiogenesis, capacity of endostatin are useful for treating and diagnosis of tumours, ocular endostatin are useful for treating and diagnosis of tumours, cular plaque neovascularisation, telanglectasia, haemophiliac joints, angiogenic diseases, Osler-Webber syndrome, myocardial angiogenesis, plaque neovascularisation, telanglectasia, haemophiliac joints, angiotibroma and wound granulation, for treatment of diseases related to excessive or abnormal stimulation of endothelial cells e.g. intestinal adhesions, atherosclerosis, scleroderma. The protein may also be useful cas a birth control agent by reducing or preventing uterine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine endostatin and angiostetin, human or murine endostatin and angiogenesis-inhibiting fusions and fragments, where the viral vector-is sufficiently attenuated for use in human gene therapy. The products of phthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retinn. The vector is administered to cells ex vivo and then administered to the patient.
                                                                                                                                                                                                                                                                                                             Plasminogen, human, angiostatin, endostatin, gene therapy, vector; anti-angiogenic; attenuation, cytostatic, anti-diabetic, ophthalmology; tumour growth; solid tumour; diabetic retinopathy; retina; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GluAlaProAlaAlaThrGlyGlnAlaSerSerLeuLeuAlaGlyArgLeuLeuGluGln 160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           161 GluAlaAlaSerCysArgHisAlaPheValValLeuCysIleGluAsnSerValMetThr 180
                                                                  The present sequence encodes an angiogenesis inhibiting factor (1), designated IAF-1. The present invention also describes: (1) preparation of (1) and its derivative; (2) an IAF binding acceptor and its preparation; and (3) an IAF antibody. (1) is useful for preparing new biological preparations for effectively treating various tumours and abnormal-vessel diseases. The IAF antibody is preferably a polyclonal antibody, mosaic antibody, single stranded antibody and human originated

The patent discloses a DNA molecule encoding a fusion protein comprising a signal sequence, an immunoglobulin Fc region, and an angiogenesis chibibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metestasis, benign tumours including. The meangiomas, acoustic neuronas, neurofibromas, trachomas and pyrogenic granulomas, theumatoid arthritis, psoriasis, ocular angiogenic diseases c. g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental collibroma, wound granulation, telangiectasis, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in gene therapy. The present sequence is a CDNA encoding human constructs in gene therapy. The present sequence is a cDNA encoding human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of plasminogen fragment, however, the rest of the specification
refers to this sequence as being nucleotide sequence of human endostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel fusion protein of angiostatin or endostatin and an immunoglobulin

The sequence encodes Human Endostatin(TW). The new method of the invention is useful for producing, recovering and purifying Endostatin convention is useful for producing, recovering and purifying Endostatin culture media, and fermentation media. Endostatin(TW) is useful for treating angiogenesis mediated diseases such as solid tumours, blood control tumours, leukaemias, tumour metastases, benign tumours, blood control tumours, leukaemias, tumour metastases, benign tumours, e.g. control tumours, retumours neurofibromas, trachomas, and pyogenic granulomas, rheumatcoid arthritis, psoriasis, ocular angiogenic diseases, control trachomas, rheumatcoid arthritis, psoriasis, ocular angiogenic diseases, control granulomas, retrolental fabroplasia, rubeosis, osler-Webber Syndrome, cancer, retrolental fibroplasia, rubeosis, osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, colon cancer, retrolental fibroplasia, rubeosis, osler-Webber Syndrome, contemporation disease of excessive or abnormal stimulation of endothelial cells such as intestinal adhesions, atherosclerosis, colon contential cells such as intestinal adhesions, atherosclerosis, color colorisatin(TW) can be stored in buffers for extended periods of time, and cologically active Endostatin(TW) are obtained by the new method.

Endostatin(TM) can be stored in buffers for extended periods of time, or also subjected to lyophilsation, while preserving biological activity.

C centrifugation of broth from fermentation steps in production is avoided, of abrief and proteins, pigments, enzymes and other cellular chemicals and adherenced and and adherenced and adherenced and activity and other cellular special such and adherenced and activity and additional proteins, pigments, enzymes and other cellular cellular specials and other cellular specials and selected and acti

                                                                                                                                                                                                                                                                                                                                                            This sequence encodes endostatin. Endostatin is a 20 kD C-terminal fragment of collagen XVIII that inhibits angiogenesis. The endostatin coding sequence may be used in the recombinant viral vector of the invention for obtaining angiostatin activity. The vector comprises a promoter capable of expressing human angiostatin operably linked to a structural gene encoding one or more domains of human angiostatin. The vector, which may be a replication-defective viral vector, is useful for inhibiting angiogenesis in a mammal, especially with cancer or a

The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the production of tumor cells (characteristic of lung, breast, ovarian, prostate, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor growth. The present sequence is used in the course of the invention.

in Streptomyces. Leader sequences of Streptomyces sp. strain CS. SnpA and S. venezuelag alpha-amylase proteins are linked to the N-terminal of endostatin. This ensures that endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. The method is used for preparing soluble recombinant human, murine or primate endostatin, which is useful in the treatment of cancer, inhibition of tumour growth, inhibition of angiogenesis, isolation of receptors for endostatin and for identification of anti-angiogenic compounds in assays. The endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation for cultivation in large quantities. Streptomycetes are amenable for cultivation in large fermentations allowing for large quantities of soluble endostatin to be produced.
                                                                                                                                                                                                                                 present sequence encodes human endostatin. The protein is expressed
                                                Preparation of soluble recombinant endostatin involves transforming Streptomycete host with expression vector comprising nucleotide sequence encoding endostatin operably linked to linker and leader
                                                                                                                                                                                 Example 1; Fig 6; 57pp; English.

This invention relates to angiogenesis-inhibiting protein receptors, and the DNA sequences encoding them. Angiogenesis is the generation of new blood vessels into a tissue, and normally occurs in wound healing, feetal and embryonal development and the formation of the corpus luteum, feetal and embryonal development and the formation of the corpus luteum, and placenta. Angiostatin is a protein (see AAB16450 and AAA68202) involved in angiogenesis, and has an amino acid sequence similar to that of a plasminogen fragment (see murine plasminogen to that of a plasminogen fragment (see murine plasminogen angiogenesis). Sequences AAA68242 and AAB16522 represent coding and protein sequences of human laminin. Laminin is an angiostatin binding protein. Sequences AAB16452 and AAB16522 represent coding and protein. Sequences of human laminin is an angiostatin binding protein. The cand some of the peptides of the invention share homology with regions of laminin. Peptides AAB16452-B16521 (excluding AAB16490) are the angiosenesis-inhibiting protein receptor fragments of the invention. The peptides bind either angiostatin or endostatin and can be used in methods corpus as solid tumours, psoriasis, scleroderma, myocardial angiogenesis, crohn's diseases and processes that are mediated by angiogenesis. Crohn's disease, cerebral collaterals, arteriovenous malformations, theories, diabetic retinopathy, arthritis, wound healing, peptic ulcers, Helicobacter related diseases, fractures, placentation and cat scratch fever. They are useful for the detection and prognosis of cancer. DNA sequences A628204-A628211 encode the peptides of the invention.
                                                                                                                                                                                                                                                                                          Angiogenesis-inhibiting protein receptor; angiogenesis; angiostatin; endostatin; plasminogen; laminin; treatment; wound healing; solid tumour; psoriasis; scleroderma; myocardial angiogenesis; Crohn's disease; cerebral collateral; arteriovenous malformation; rubeosis; cancer; diabetic retinopathy; arthritis; wound healing; peptic ulcer; Helicobacter related disease; fracture; cat scratch fever; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New angiogenesis-inhibiting protein receptors, useful in methods for treating diseases and processes that are mediated by angiogenesis, such as solid tumours, psoriasis, scleroderma and myocardial angiogenesis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 86; 100pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GluAlaProAlaAlaThrGlyGlnAlaSerSerLeuLeuAlaGlyArgLeuLeuGluGln 160
                                                                                                                                         The present sequence encodes human endostatin, an angiogenesis inhibitor, derived from human liver cDNA. This is the C-terminal protecolytic fragment of collagen 18a. Endostatinn can inhibit endothelial cell proliferation in vitro and angiogenesis in vivo. This is used in the construction of the expression plasmid for the treatment of mammalian diseases, especially cancer. The plasmids can be used for (in vivo) transfection of a cell in situ in order to modulate tumour activity. Anti-angiogenic gene inhibits growth of solid tumour and lung metastatic tumours by intravenous or intramuscular delivery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           80

                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides endostatin peptides which can be used in the modulation of angiogenesis. This is useful in the treatment of cancers, inflammation, rheumation arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of prematurity, acular degeneration, corneal graft rejection, retrolental fibroplasia, rubeosis, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent neconsequication, reheave syndrame, mycoardial angiogenesis, plaque neconsequisation, telangiectasia, hemophiliac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 GGCGGCATGCGGGGCATCCGCGGGGCCGACTTCCAGTGCTTCCAGCAGGCGCGGGGCCGTG 120

angiogenesis. The method comprises administering to a human or animal a composition comprising a protein that is homologous to PITSLRE protein kinase (PK) and an angiogenic factor. The method is useful for regulating angiogenesis related to cancer, arthritis, macular degeneration, and diabetic retinopathy. The compositions are useful for inhibiting angiogenic retinopathy. The compositions are useful compositions are useful in treating diseases. The method and compositions are useful in treating diseases and processes that are mediated by angiogenesis including haemangioma, solid tumours, blood borne tumours, leukaemia, metastasis, telangiectasia, psoriasis, collacterals, arteriovenous malformations, ischaemic limb angiogenesis, collaterals, arteriovenous malformations, ischaemic limb angiogenesis, corneal diseases, rubeosis, neovascular glaucoma, diabetic retinopathy, macular degeneration, wound healing, peptic ulcer, Helicobacter related diseases, fractures, keloids, vasculogenesis, haematopoiesis, ovulation, macular degeneration, and cat scratch fever. The method of the invention provides a therapy for cancer that has minimal side effects. The present sequence encodes human endostatin which is used to generate angiogenesis-inhibiting peptides. The present invention relates to methods and compositions of inhibiting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 3, 1

US-09-561-500-12

US-09-561-500

Sequence 12, Application US/09561500

Patent No. 634219

GENERAL INFORMATION:
APPLICANT: Philip E. Thorpe

APPLICANT: ROLf A. Brekken

TITLE OF INVENTION: ANTIBODY COMPOSITIONS FOR SELECTIVELY INHIBITING VEGF

FILE REFREENCE: 4001.025200

CURRENT APPLICATION NUMBER: US/09/561,500

CURRENT PILING DATE: 2000-04-28

PRIOR APPLICATION NUMBER: 60/131,432

PRIOR FILING DATE: 1999-04-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PheSerPheAspGlyArgAspValLeuGlnHisProAlaTrpProArgLysSerValTrp 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 HisGlySerAspProSerGlyArgArgLeuThrAspSerTyrCysGluThrTrpArgThr 140
